

I am a pilot in a Civil Air Patrol Senior Squadron. We use HF and VHF radios for air-to-ground communications on missions that usually involve search and rescue. It is my understanding that BPL has the capability to interfere with our HF and/or VHF radio reception. If so, that presents a clear impediment to the successful accomplishment of our missions. If BPL is implemented, it must be done in such a way as to permit clear transmission of HF/VHF radio signals. To do otherwise would be to further endanger those we are attempting to save. I trust mine is not the only voice raised against this proposal in its present form. Thank you for your consideration.
